HR Attrition & Workforce Analytics Dashboard

Prepared By: Divya K

Version: 1.0

Status: Draft

Project Type: HR Analytics / Business Intelligence

1. Executive Summary

The purpose of this project is to develop an interactive HR analytics dashboard that provides management with visibility into employee attrition and workforce trends.

The dashboard will enable HR and business leaders to analyze employee turnover across departments, job roles, income levels, tenure, overtime, job satisfaction, and other workforce factors.

The solution will support data-driven decision-making and help identify employee groups that may require additional retention attention.

2. Business Problem

HR management currently lacks a centralized and interactive view of employee attrition.

Employee information may be available in raw HR data, but identifying patterns such as high attrition among specific departments, job roles, tenure groups, or overtime employees requires manual analysis.

Without an easily accessible analytical dashboard, management may have difficulty identifying workforce trends and potential employee-retention concerns.

3. Business Objectives

The project aims to: **Improve visibility into employee attrition.**

Identify departments and job roles with higher attrition rates.

Understand the relationship between attrition and factors such as overtime, income, tenure, job satisfaction, and work-life balance.

Provide HR management with interactive filtering capabilities.

Enable management to identify workforce trends and support employee-retention decisions.

4. Stakeholders

Stakeholder	Interest / Responsibility
HR Manager	Monitor overall employee attrition
HR Business Partner	Analyze attrition by department and employee group
Department Managers	Understand workforce trends within their teams
Senior Management	Review high-level workforce KPIs
Business Analyst	Gather requirements and define dashboard needs
Data / BI Analyst	Develop and maintain the Power BI dashboard

5. Project Scope

In Scope

The dashboard will analyze:

- Employee headcount
- Employees who left the organization
- Attrition rate
- Department-level attrition

- Job-role attrition
- Overtime and attrition
- Employee tenure
- Monthly income
- Job satisfaction
- Work-life balance
- Interactive filters for relevant workforce dimensions

Out of Scope

The project will not include:

- Predictive machine-learning models
- Payroll processing
- Recruitment management
- Employee performance-management systems
- Real-time HR-system integration
- Automated employee-retention actions

6. Current State

HR data is available at the employee level, but the information is not presented through a consolidated interactive reporting solution.

Users must review individual employee records or manually analyze the dataset to understand attrition trends.

This makes it difficult to quickly answer questions such as:

Which department has the highest attrition?

Are employees working overtime more likely to leave?

Which job roles experience higher turnover?

Does employee tenure or income appear related to attrition?

7. Business Requirements

ID	Business Requirement	Priority
BR-01	The business shall be able to view total employee headcount.	High
BR-02	The business shall be able to view the number and percentage of employees who left the organization.	High
BR-03	The business shall be able to analyze attrition by department.	High
BR-04	The business shall be able to analyze attrition by job role.	High
BR-05	The business shall be able to compare attrition between employees working overtime and those not working overtime.	High
BR-06	The business shall be able to analyze attrition based on employee tenure.	Medium
BR-07	The business shall be able to analyze attrition across income groups.	Medium
BR-08	The business shall be able to compare job satisfaction and work-life balance.	Medium
BR-09	Users shall be able to filter dashboard information by department, job role, gender, and overtime status.	High
BR-10	The dashboard shall provide management with summarized workforce KPIs for decision-making.	High

8. Dashboard Requirements

KPI Requirements

The dashboard should display:

Total Employees

Employees Left

Attrition Rate
Average Monthly Income
Average Years at Company
Analysis Requirements

The dashboard should provide visual analysis for:

Attrition by Department
Top Job Roles by Attrition
Overtime vs Attrition
Attrition by Tenure
Attrition by Income
Job Satisfaction vs Work-Life Balance

Filtering Requirements

Users should be able to filter the dashboard by:

Department, Job Role, Overtime and Gender.

9. Assumptions & Dependencies

The provided HR dataset is assumed to be accurate and complete.
Each employee record represents one employee.
The Attrition field is assumed to correctly identify whether an employee left the organization.
The dashboard is based on historical HR data and does not provide real-time workforce information.
Power BI Desktop is used to develop the dashboard.

10. Success Criteria

The project will be considered successful if users can:
Quickly identify the organization's overall attrition rate.
Identify departments and job roles with higher attrition.
Analyze possible relationships between attrition and overtime, tenure and income.
Filter workforce information interactively.
Use dashboard insights to support HR workforce and retention discussions.

11. Risks

Risk	Impact	Mitigation
Incomplete or inaccurate HR data	Dashboard results may be misleading	Validate and clean data before analysis
Incorrect KPI definitions	Users may interpret results incorrectly	Clearly define business metrics
Limited historical information	Trends may not represent future behavior	Clearly communicate dataset limitations
Correlation interpreted as causation	Incorrect business conclusions	Present findings as analytical relationships rather than proven causes

12. Approval

Role	Name	Approval	Date
Business Analyst	Divya K	Prepared	22 Sep 2026

* **Note:** This BRD was created as a portfolio project using a simulated business scenario and publicly available HR data.
